Schluter®-KERDI-DRAIN

Point drain with integrated bonding flange

Schluter®-KERDI-DRAIN is a shower drain with an integrated bonding flange that provides a large contact area for a secure connection to the KERDI waterproofing membrane at the top of the assembly. The grate assembly can be seamlessly adjusted to the thickness and layout of the ceramic tile or stone covering. KERDI-DRAIN is available with several grate designs, including a frameless tileable covering support, and offered in nine TRENDLINE colors to match with Schluter®-SHELF, trim profiles, and fixtures.

Schluter®-KERDI-DRAIN and Schluter®-KERDI-DRAIN-H

Schluter®-KERDI-DRAIN and **KERDI-DRAIN-H** are floor drains with an integrated bonding flange that provides a large contact area for a secure connection to the Schluter®-KERDI waterproofing membrane at the top of the assembly. Both KERDI-DRAIN and KERDI-DRAIN-H are appropriate for both mortar bed and Schluter®-KERDI-SHOWER-T/-TS/-TT shower tray applications. The bonding flange is sloped to simplify installation of the mortar bed.

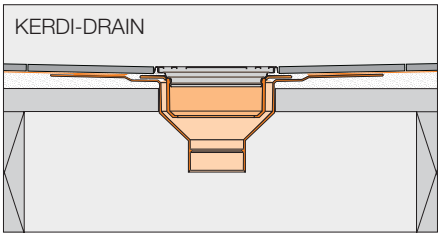

The KERDI-DRAIN flange provides a vertical connection to the drain pipe and is available in ABS or PVC with 2" or 3" *(50 or 75 mm)* outlet, and stainless steel with a 2" or 3" *(50 or 75 mm)* no-hub outlet or 2" *(50 mm)* threaded outlet.

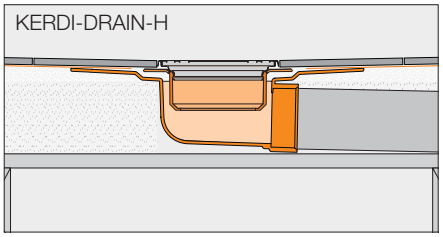

The KERDI-DRAIN-H flange provides a horizontal connection to the drain pipe and is available in ABS or PVC with a 2" *(50 mm)* outlet. It is ideal for applications where the use of a vertical connection to the drain pipe is not possible or practical (e.g., suspended or post-tension concrete floors, basement slabs, or wood floor installations where relocating the hole in the floor is not practical). The horizontal outlet allows the positioning of the drain in the desired area regardless of drain pipe location.

A compensation board is available for use with KERDI-DRAIN-H in conjunction the KERDI-SHOWER-T/-TS/-TT shower trays.

KERDI-DRAIN and KERDI-DRAIN-H feature a fully adjustable grate (available in stainless steel and anodized aluminum in various finishes) that accommodates a wide range of tile thicknesses: 1/4" *(6 mm)* to 1-1/4" *(32 mm)*; or a tileable covering support that accommodates any tile thickness and creates a virtually invisible drainage line. The grate assembly allows lateral and tilt adjustment as well. Please note that grate assemblies used with the plastic KERDI-DRAIN featuring 3" *(75 mm)* outlets only allow vertical and tilt adjustment (no lateral adjustment). 6" *(150 mm)*-square stainless steel covers are also available for installations where KERDI-DRAIN or KERDI-DRAIN-H are to be used in a cleanout application.

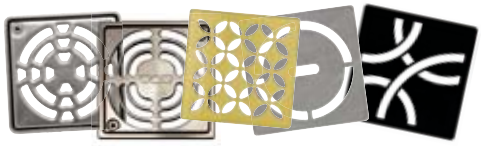

Selecting your Schluter®-KERDI-DRAIN

Schluter®-KERDI-DRAIN flanges and grates are sold separately.

1 Select your grate from pages 134 - 137.

2 Select the flange appropriate for your application from the tables on pages 138 - 143.

- When using a flange with a 3" *(75 mm)* outlet, a 6" *(150 mm)* grate is recommended.
- When using the KERDI-DRAIN-F flange, the 4" *(100 mm)* tileable grate and 6" *(150 mm)* round and square grates are not suitable.
- When using the KERDI-DRAIN-A flange with 5-1/2" *(140 mm)* adaptor ring, the 6" *(150 mm)* round and square grates are not suitable.
